

Epic 1: Customer Order Management

This epic covers everything a customer needs to view the menu, customize their meal, and place an order quickly.

User Story 1: Digital Menu Browsing

- As a hungry customer,
- I want to view a categorized digital menu with real-time food availability,
- So that I can quickly pick what I want without wasting time at the physical counter.
- *Acceptance Criteria:* Menu updates instantly when an item is sold out.

User Story 2: Meal Customization

- As a customer with specific preferences,
- I want to add or remove ingredients (e.g., extra chicken, no onions) before adding an item to my cart,
- So that my order is prepared exactly how I want it without needing verbal explanation.
- *Acceptance Criteria:* Modification options show specific price changes clearly.

User Story 3: Order Summary & Review

- As a customer ready to checkout,
 - I want to see an itemized summary of my order and the total cost,
 - So that I can double-check everything before making a final payment.
 - *Acceptance Criteria:* User can edit quantities or delete items directly from this summary screen.
-

Epic 2: Seamless Digital Payments

This epic focuses on integrating fast payment methods relevant to the Nigerian market to prevent delays at checkout.

User Story 4: Multi-Channel Payment Integration

- As a busy customer,
- I want to pay securely using card, bank transfer, or USSD,
- So that I do not have to wait in line to pay with cash or a physical POS machine.
- *Acceptance Criteria:* Integration with a payment gateway (e.g., Paystack or Flutterwave) confirms payment under 10 seconds.

User Story 5: Save Payment Method

- As a frequent restaurant customer,
- I want to securely save my preferred payment details,
- So that I can complete future checkouts with a single tap.
- *Acceptance Criteria:* Card details are tokenized securely and compliant with PCI-DSS standards.

User Story 6: Instant Digital Receipt

- As a paying customer,
- I want to receive an instant digital receipt and order confirmation number on my screen and via email,
- So that I have proof of payment without waiting for a printed paper receipt.
- *Acceptance Criteria:* Unique 4-digit order number is generated immediately upon successful payment.

Epic 3: Kitchen Fulfillment & Order Tracking

This epic ensures the kitchen staff gets the orders instantly and the customer knows exactly when to walk up and collect their food.

User Story 7: Real-Time Kitchen Display

- As a kitchen chef,
- *I want to* see incoming app orders instantly on a kitchen display screen ordered by time received,
- *So that* I can prepare the food immediately without waiting for a waiter to bring a paper ticket.
- *Acceptance Criteria:* New orders trigger an audio alert and highlight the customized ingredient requests.

User Story 8: Live Preparation Status

- As a waiting customer,
- *I want to* track my order status (Received, Preparing, Ready for Pick-up) on my app,
- *So that* I only walk to the collection counter when my food is actually ready.
- *Acceptance Criteria:* Status updates automatically change color (e.g., Green for "Ready").

User Story 9: Estimated Wait Time Indicator

- As a customer placing a rush order,
- *I want to* see a dynamic estimated preparation time before I confirm my order,
- *So that* I can manage my expectations and plan my arrival at the pickup point.
- *Acceptance Criteria:* Algorithm calculates time based on current kitchen queue volume.

User Story 10: Secure Pickup Verification

- As a counter collection agent,
 - *I want to* verify the customer's order number or scan a QR code from their phone before handing over the food,
 - *So that* I ensure the correct meal goes to the correct customer quickly.
 - *Acceptance Criteria:* System marks the order as "Delivered" once the code is successfully matched.
-
